

Depositing Cell lines in EBiSC

The **European Bank for Induced pluripotent Stem Cells** (EBiSC) is a not-for-profit iPSC cell banking and distribution service enabling academic and commercial researchers to access quality-assured, disease relevant, research-grade iPSC lines, data and cell services.

Benefits for cell line depositors*:

- EBiSC will generate valuable Quality Control characterisation data for your iPSC lines.
- Avoid future costs associated with maintenance and distribution of your iPSC lines.
- Reduce time spent negotiating multiple MTAs with others to share your lines for collaboration.
- Remain as the owner your iPSC lines. Enhance the chance of commercial out-licensing.
- Satisfy the requirements of funding bodies and journals to share iPSC lines after publication.
- Avoid potential loss of precious material as EBiSC acts as a safe repository for your iPSC lines.
- Receive a two-vial credit for each cell line banked with EBiSC, to be used for obtaining vials of cell lines deposited by yourself or others in EBiSC.
